

Server Error in Application "DEFAULT WEB SITE"

Internet Information Services 7.0

Error Summary

HTTP Error 403.6 - Forbidden

The IP address from which you are browsing is not permitted to access the requested Web site.

Detailed Error Information

| | | | |
|--------------|----------------------------|---------------|--|
| Module | IpRestrictionModule | Requested URL | http://www.22ndsaudiurology.com:80/ |
| Notification | BeginRequest | Physical Path | C:\inetpub\wwwroot |
| Handler | StaticFile | Logon Method | Not yet determined |
| Error Code | 0x80070005 | Logon User | Not yet determined |

Most likely causes:

- The server, site, application, or page requested has explicitly denied the IP address of the client computer.

Things you can try:

- Verify the IP and domain restrictions in IIS Manager.
- Remove the IP restrictions from the configuration/system.webServer/security/ipSecurity section of the configuration file for the server, site, application, or page.

Links and More Information

Set IP restrictions at the server, site, application, or file level. Verify or change the IP restrictions at the site level.
